

LIGHTPAPER

01

Introduction

Tokiplace is a platform developed by Tokenable Ltd. A next-generation NFT marketplace built on the Ethereum blockchain, with consumers and communities in mind.

We're powered by a solid network for performance and scalability where users can leverage all features of the Ethereum ecosystem, with an intuitive and no-code trading experience for all digital goods.

NFT

A keyword that includes financial assets, artwork, images, trading cards, music, and online games.

The acronym NFT represents a set of digital information contained in a blockchain that guarantees rights and attributes to a specific subject. A token is cryptographically associated with a media file, which when purchased becomes a certificate of ownership and authenticity recorded in a blockchain.

Essentially, an NFT would be a digital version of a limited edition collector's item.

NFT or non-fungible tokens became a major digital topic in 2021 and hit the headlines in March 2021 when Beeple's "The First 5000 Days" became the world's most expensive NFT reaching 69 million US dollars. This sale led to an "NFT craze", with Google's search interest in the "NFT" keyword particularly high in Asia and the United States.

Currently, the major brands in the world have included NFTs among their commercial assets.

Digital tokens aren't new though. CryptoKitties' NFTs - a project involving randomly generated cat images - dates back to 2017.

03

Tokiplace Overview

Taking the Crypto universe to the next level

We see ourselves as a foundational piece to enable the future of digital art, collectibles, and crypto-assets that will be used by every artist, every crypto investor, and every brand and community.

Artists can obtain authenticity and liquidity for their work.

For **collectors**, a place to find rare and unique works.

For **novices**, Tokiplace acts as an entry point to crypto and art.

For **investors**, Tokiplace offers an excellent development project for their business, whether they want to invest in *capital gains* or *cash flow*.

NFTs are no longer a "new thing", and new marketplaces come out every day. Tokiplace makes the difference by offering a unique and valuable experience:

Scarcity and uniqueness

All of the platform's content will be offered in limited quantities. Scarcity allows creators to personalize their work in new and interesting ways while also challenging conventional concepts of worth.

Any valuable content

Tokiplace welcomes all types of content, including 2D images, 3D models, music albums, and literature. Our goal is to simplify NFT commerce so that our users can easily find and transact with the content they want.

Decentralized market

Through smart contracts hosted on the Ethereum network it is possible to trade directly and in total safety with any user on the platform.

Low commissions and high-performance

Tokiplace can transact in an ultra-fast and secure environment, limiting the visibility of commissions to our end users thanks to the Ethereum network.

Eco-friendly

Reducing the environmental impact is at the top of our thoughts. Ethereum is upgrading its protocol from *proof of work* to *proof of stake*, severely limiting energy consumption. Its goal is to improve the speed, efficiency, and scalability of the Ethereum network: more eco-sustainability and volume of transactions.

Whether for-profit or thrills, Tokiplace users have unmatched options for how they want to interact with their rare digital goods.

04

Platform features

Tokiplace's platform will be dedicated to the creation, discovery, and trade/distribution of NFTs. We're happy to launch a slew of new and unique features built from the ground up to use NFT as a transaction and content media. However, once the platform is in place, we'll start focusing on allowing consumers to get more value out of their NFTS than just ownership.

Boosting creation

The Tokiplace ecosystem will be supported by a fully configurable NFT generation mechanism. We want to provide all authors with a set of NFT minting options that can accommodate any distribution goal.

- Define your own scarcity options, such as unique or limited, using the blockchain. Holders of verified tokens will have access to increased scarcity limits.
- Define adjustable royalties on creation to get secondary sale commissions (up to 10%). Verified token holders will also have access to increased royalties.

- Tokenize any type of content as an NFT. Users may utilize our NFT generation module to batch any number of files and extensions into a single NFT unit.
- Preview options for your tokenized material that may be customized and expanded. With support for all file kinds, including 2D and 3D media, audio, video, and more, you can preview the NFT listings in any way you like.

Extended Discovery

The major method of locating NFTs in the market will be discovery. Browsing the marketplace and locating NFTs of interest should be easy, straightforward, and, most importantly, enjoyable for the community.

- Tokiplace team content and preferred NFTs will be regularly featured and voted on by the community.
- If you are an existing artist or creator, register for a verified profile with the Tokiplace team to be listed in the verified marketplace area.
- On your profile, organize similarly related NFTs into private or public collections.
- Following favorite profiles, bookmarking favorite NFTs, and sharing to external programs are all robust social capabilities amongst users.
- Build social channels for the community to advertise, discuss, and interact with NFTs based on a specific subject.

- Check previous performance activities for both users and NFTs as validated by the blockchain.

Trade Facilitation

Users may deal safely on the Tokiplace platform via a variety of trading alternatives once they have established their NFTs or located the NFT of their wishes. Traders will have a variety of transaction alternatives available to them in order to reduce the hassle while boosting the trade.

- Owners and creators can specify the transaction mechanism for their items, such as one-click buy, auction (highest-bid), private bids (on-approval), gifts (free), and others.
- Automatic royalties to the creator from any genuine secondary sale of an NFT, in accordance with the original author's specifications.

Fees

Users may deal safely on the Tokiplace platform via a variety of trading alternatives once they have established their NFTs or located the NFT of their wishes. Traders will have a variety of transaction alternatives available to them in order to reduce the hassle while boosting the trade.

Tokiplace service fee

2,5%

Holder secondary sale

up to 10%

Further Leverage Features

We acknowledge the enormous future potential of NFTs and want to develop internally as well as collaborate with existing community initiatives to generate value from our tokenized content. A marketplace can substantially simplify the circulation of new content, but an ecosystem will unleash global advantages for all NFT holders. Tokiplace future leverage features will be:

- **NFT Stake**

In the crypto world, NFT staking is an innovative approach to making passive income. To collect benefits, NFT holders can lock their assets on the Tokiplace platform. And all without having to sell their NFT collections.

- **Fractionalized NFTs**

Partial ownership of NFTs through secondary tokens, as validated by smart contracts, would provide additional liquidity on secondary markets while benefiting from the value transfer of the original token.

- **Leased NFTs**

Lease NFTs to other interested users using smart contracts to earn interest on items valued by others. Unlock revenue potential from your tokens in never-before-seen ways.

- **NFT Loans**

Deposit NFTs as collateral in specific smart contracts to obtain loans from users.

05

TOKI Tokens

Tokiplace will be governed and supported beyond the marketplace by our native and fungible TOKI tokens. TOKI tokens will be utilized as a utility token as well as a governance token.

TOKI Application

Platform users will get a slew of benefits merely by owning confirmed amounts of TOKI tokens. These advantages will not be available to users who do not have TOKI tokens, who will be restricted by the default limits.

- **Settle and fund transactions**
Fund and settle your trades using the native TOKI token in lieu of Eth's.
- **Priority listings and discovery**
Listings from verified token holders will receive higher exposure and priority on our marketplace.
- **Increased minting limits**
Creators verified with TOKI tokens will also have higher limits when issuing and distributing their content.

- **Reduced platform service fee**

When trading or doing specified actions on the platform, verified token holders are also entitled to lower service fees or receive a certain amount of token cashback.

- **Exclusive sales access**

Holding verified tokens also grants you access to exclusive item auctions, exclusive drops, and special listings from the community and the Tokiplace team.

- **Community governance**

Verified token holders can also participate in exclusive social groups and proposal voting for the Tokiplace platform. The more TOKI a user holds, the more voting power they will have.

TOKI Distribution

TOKI tokens will be available to users with the initial distribution. TOKI tokens can also be obtained through a variety of means.

TOTAL SUPPLY - 500.000.000

- **Development** 20%
(marketing, advisors, technical support)
- **Found** 30%
(sales, contributors, holders)
- **Founder team** 10%
- **Reserve** 15%
(contingency)
- **Community pool** 25%
(community rewards)

Roadmap

Q1

- ★ Marketplace development (beta)
- ★ Creation & Trade features
- ★ Token development

- ★ Testnet launch
- ★ Smart Contracts
- ★ Wallet integrations
- ★ Social channels

Q2

- ★ Community building
- ★ Mainnet launch
- ★ Marketplace launch

- ★ Collections
- ★ Token listing

Q3

- ★ Token sale
- ★ Additional features
- ★ Flexible royalties

- ★ Additional trade currencies
- ★ Public profile verification
- ★ Mobile support

Q4

- ★ Play2Earn
- ★ Metaverse integrations
- ★ Additional features
- ★ Donation
